

The Global Energy Transition: Challenges and Opportunities

Concluding Remarks:

- Angola as the 2nd largest oil producer in Africa has an important role to carry out in the global energy transition
- Natural gas as the “bridging fuel” will become more highly important
- Angola with its existing gas reserves and unexplored offshore and onshore gas potential will have an increasingly high profile in the energy transition

The Energy Transition: Challenges and Opportunities

Concluding Remarks:

- Complete and reliable oil & gas data is even more important now than before – geological & geophysical data, production data, reserves information, and economic information
- This data is critically needed to effectively explore and develop more natural gas, develop fields for storage of CO₂, and explore for geothermal energy
- Angola's oil & gas professionals will have an increasingly important role as the global energy transition gains more momentum
